

# Testosterone Cypionate 250 mg Rus Bio

## Description

**Manufacturer: Rus Bio Pharma**

**Pack: 10 ml / (250 mg/ml)**

**Substance: Testosterone Cypionate**

# What is Testosterone Cypionate? Rus Bio Testosterone Cypionate – Testosterone Booster

**Rus Bio Testosterone Cypionate** is the brand name of the active substance **Testosterone Cypionate** – one of the many esterified forms of **testosterone** and is one of the longest esterified form of **testosterone** and that's why is one of the most used and most famous forms of **Testosterone**.

**Rus Bio Testosterone Cypionate** is a product manufactured by the famous pharmaceutical company that is focused in manufacturing high quality **Performance Enhancing Drugs** including steroids called **Rus Bio** and this is already a famous pharmaceutical company due to their professionalism which offers customers high quality medications for lowest prices.

**Rus Bio Testosterone Cypionate** is containing purest and highest quality product of **Testosterone Cypionate** where the active ingredient is **Testosterone** and **Cypionate** is just the attached ester. There are many different esters attached to testosterone such as **Propionate, Enanthate** and others, but **Cypionate** is considered the longest acting and is also one of the most famous and used form of **Testosterone**. There is no difference between **Testosterone Cypionate** and any other esterified form of **Testosterone** except for the time release that this compound is released in the body after it got administered.

But in the end, you receive synthetic testosterone which is absolutely no different from naturally produced **testosterone**. They are working the exact same way without any difference. And **testosterone** is the essential hormone for having a healthy life, especially for males. This is the reason why this compound is having numerous uses in medical settings for various health conditions such as low testosterone levels and others.

But except for that, synthetic **testosterone** got extremely famous for bodybuilders and athletes in various sports fields and that's because this is the main hormone for growing muscles, increasing size and strength as well as to greatly enhance performance. This is the compound which can help you with all types of training phases: cutting, hardening, bulking etc. That's why, **testosterone** is one of the most used anabolic and androgenic steroids for physique and performance enhancement purposes.

## Testosterone Cypionate Rus Bio Half Life

As it was earlier mentioned, there's no other difference between testosterone cypionate and any other given **testosterone** except for the time that the main

compound (**testosterone**) is being released in the system after it got administered and the half life.

There are esters which prolongs the release for only a little while and others offers much longer half lives. This comes with a number of advantages and disadvantages and based on them, the individual decides which **testosterone** he needs.

Talking specifically about **testosterone cypionate** – is having a half life of 5-8 days which is longer than **enanthate** or especially propionate. However, the detection time is longer too: 3-4 months.

## What is Testosterone Cypionate Rus Bio Used For? | What Does Testosterone Do? | Rus Bio Cypionate Uses

**Rus Bio Testosterone Cypionate** is used for many different medical uses. However, if we are talking about testosterone itself as the hormone and what is being used for and what it does in the human body then this would take forever. Testosterone is the essential and main hormone for a proper development. It affects so many aspects of our lives, especially for a man, that we couldn't live without testosterone.

**Testosterone** responds for male specific traits, but it has other uses such as growing muscles, enhancing performance, emotional state of a man and much more.

As when talking specifically about **testosterone cypionate** then we can mention that, this is one of the most widely used steroid for physique and performance enhancement. This product is used in a lot of different steroid cycles and is used for various needs. But in medical environments is mainly used for **Androgen Replacement Therapy** but it has other uses as well such as osteoporosis, delayed puberty in boys, breast cancer and others.

## Testosterone Cypionate Rus Bio Dosage | Testosterone Cypionate Cycle | Rus Bio Cypionate Administration

**Rus Bio Testosterone Cypionate** dosage can vary extremely much for a person to another depending on many different factors such as personal tolerance to the product, what are the expected results, why you need to use it, what do you use alongside with testosterone and many other factors.

For example, if you're getting prescribed **testosterone** cypionate for whatever the health condition by your doctor then we would recommend to use it exactly as prescribed by your doctor.

However, if you need it for physique and performance enhancement then dosages generally vary anywhere in between 250 mg a week up to about 1000 mg a week. Due to its pretty long half life, people are doing OK with once a week administration. Some people decide to split up the total weekly dose in 2 even halves used in 2 days evenly apart, but that's not very necessary.

Most people find their sweet spot anywhere in the range of 400 to 600 mg a week but we recommend to start slowly and go up on your dosage if you need so. **Testosterone** is extremely versatile. It can be used as **TRT**, cutting agent, hardening as well as bulking. It all depends on the dosage and what steroids you use with it. Any steroids can be used – for bulking or cutting.

## Testosterone Cypionate Side Effects | Rus Bio Cypionate

Women are very warned of **virilization** side effects. Due to its long half life, women shouldn't use it because even when they stop taking **Testosterone Cypionate**, it takes quite a while to flush out of your body. Women needing testosterone should go for short esters.

Males risk getting side effects associated with too high **testosterone** levels. Those are pretty much the only side effects possible but too high **testosterone** levels can be associated with different **androgenic** side effects such as oily skin, hair loss, acne and others. You also might receive **estrogenic** side effects such as water retention, gynecomastia including others too.

Plus to that, **cardiovascular** and **cholesterol** negative effects might appear too, especially with higher doses. It is also important to know that receiving synthetic **testosterone** – your body “thinks” that it produces too much and that's why the natural **testosterone** production is inhibited.

After you stop using synthetic **testosterone** and production naturally is inhibited you might run into **low testosterone condition**. That's why is very advised to have a good **PCT plan**.
