

Testosterone Propionate 100 mg Rus Bio / 10 ml

Description

What is Testosterone Propionate? | Rus Bio Propionate – Testosterone Booster

Testosterone Propionate that is sold as the brand name **Rus Bio Testosterone Propionate** is a synthetic esterified **testosterone** with the shortest period of active work and half life out of all other esterified **testosterones** out there. **Rus Bio Testosterone Propionate** is manufactured by **Rus Bio Pharma** – a famous pharmaceutical company that is known for manufacturing high quality medications that can help with physique and performance enhancement.

Rus Bio Testosterone Propionate is offering synthetic **testosterone** that is working the same way as natural **testosterone**, with this being said, the users are basically getting more **testosterone** which helps them to build an amazing physique.

Rus Bio Testosterone Propionate is having various medical uses as well such as **testosterone** replacement, delayed puberty in boys and some others. When it comes to physique and performance enhancement uses by bodybuilders and athletes, it is mainly being used for drying courses while losing body fat and preserving current muscle mass is the main objective. It is specifically helpful for those athletes who are requiring some endurance indicators enhancement.

The **testosterone** is generally being considered the “father” of all steroids as this is the main hormone for growing muscles and building a good looking physique. Because of more natural **testosterone** levels found in men, they generally are having more muscle mass than women.

This is a steroid with a profile showing 100% of androgen and anabolic being aromatizable and offering no risk for liver toxicity. This is one of the most famous and most used form of **testosterones** out there because this is one of the best choice for those people who are competing and prepare for getting enhanced in both the way they look and perform.

Testosterone Propionate Half Life

Testosterone is the active substance here but it comes with the attached **Propionate** ester which is the shortest ester for **testosterone** known. That’s why, out of all other **testosterones**, it offers the shortest half life. Except if talking about the non esterified **testosterone** that has no ester.

The ester is a molecule that is delaying the time release of the active substance in the body after it got administered. **Propionate** is believed to release the substance offering a half life of 1 to 3 days maximum. That's shorter compared other esters like **Enanthate** (7-10 days) or **Cypionate** (8-12 days) or others.

The half life of **testosterone** itself is very short of only 2-4 hours.

What is Testosterone Propionate Rus Bio Used For? | What Does Testosterone Do? | Rus Bio Propionate Uses

Rus Bio Testosterone Propionate is being used for various medical uses such as **low testosterone levels** in men, delayed puberty in boys, breast cancer in women, low sexual desire for men and others. Nonetheless, the product is extremely widely used for physique and performance enhancement purposes by bodybuilders, powerlifters and competitive athletes.

This steroid is mainly being used by those people who are searching for drying out. Those are cutting and hardening phases of training when the individual tries to lose body fat in the time of maintaining current muscle mass. It also can be used for bulking cycles when individual is searching for as much muscle mass as possible. However, generally, for such purposes long esterified **testosterones** are used.

The use of this product is associated with huge and most often permanent gains when talking about muscle gains, muscle functions, size, endurance, strength, aggression as well as general improvement of physique and performance when talking about intense workouts.

This is an extremely important hormone (essential) for our bodies when it comes to better bone density, muscle strength and mass, fat distribution, sperm production, general state of well being, sex drive and many others.

Many people think – the more testosterone you have, the more man you are, the bigger you get, more muscles you have etc. No wonder why is so widely used all over the world.

Testosterone Propionate Dosage | Rus Bio Propionate Administration

Taking in consideration that **Testosterone Propionate** is having a short half life, people tend to use it on a daily basis. There are sources suggesting the half life is less than a day (about 20 hours) while others suggest that is about 3 days, in whichever the case, for getting stable blood levels, it is requires to have at least once a day administration with **Testosterone Propionate**.

Also, regardless which form of [testosterone](#) you use (propionate or other), the recommended weekly dosage is falling anywhere in the range of 200 to 800 mg with most people finding their sweet spot at about 500 mg weekly.

Taking in consideration that you need to use **Rus Bio Pharma** on a daily basis, then the daily dose is usually ranging anywhere in between 50 mg to 100 mg per injection. Some people decide to use even less either for **TRT** or for other uses such as getting it as a booster or other purposes. Others deicide to use more but that increasing the side effects risks.

Testosterone can be stacked with nearly any given steroid of your choice and it can be taken for any given physique and performance enhancement purposes as is very universal.

Testosterone Propionate Rus Bio Side Effects | Rus Bio Propionate

Side effects of **testosterone** propionate are exactly the same as with any other testosterone forms. Generally, that's because you're receiving synthetic testosterone working the exact same way as natural occurring testosterone. With this being said, you may be using too much and a surplus of testosterone is going to come with its own side effects.

This is the reason why using too much **testosterone** is associated with side effects. If using **Rus Bio Propionate** within normal doses then you are going to stay away from side effects, at least in most cases because, obviously, most men tolerate **testosterone** very well.

Generally, side effects are being associated with **androgenic**, **estrogenic** and **testosterone suppression**. These are the worst. **Testosterone suppression** might lead to low testosterone levels post use and this is a condition coming with nasty side effects. A **PCT** plan is very recommended at the end of cycle.

Androgenic side effects include oily skin, acne, hair loss, aggression and **virilization** for women (getting masculine traits). **Estrogenic** side effects are seen in males such as: water retention, depression, gynecomastia and others.
