

Testosterone Enanthate 250 mg Rus Bio

Description

Manufacturer: Rus Bio Pharma

Pack: 10 ml / (250 mg/ml)

Substance: Testosterone Enanthate

What is Testosterone Enanthate | Rus Bio Enanthate – Testosterone Booster

Testosterone Enanthate Rus Bio is one of the many esterified forms of **Testosterone** and is one of the most famous **testosterone** compound in the world alongside with **Testosterone Cypionate** and **Testosterone Propionate**. You can purchase it as the brand name **Rus Bio Testosterone Enanthate**.

This product is manufactured by **Rus Bio** – a famous pharmaceutical company that is oriented in selling only high quality products that can help with physique and performance enhancement. Since this pharmaceutical company is focused in manufacturing only high quality performance enhancing drugs, is very expected that **Rus Bio** containing **Testosterone Enanthate** is going to be a very high quality anabolic and androgenic steroid.

Testosterone Enanthate Rus Bio is actually offering the main ingredient – the **testosterone** hormone which is synthetic testosterone no different from the naturally occurring **testosterone**. As soon as the product is administered, it starts working by increasing the total number of testosterone in the body and with elevated levels of testosterone, you start receiving the benefits which are often associated with physique and performance enhancement.

Taking in consideration that **testosterone** is the main and the essential hormone for building muscles, increasing size, losing body fat, enhancing performance, increasing strength levels and many other “physical” benefits – no wonder why testosterone compounds are so widely used by bodybuilders, athletes and powerlifters.

But synthetic **testosterone** is having various medical uses too. For example, **testosterone enanthate** is mostly used in androgen replacement therapy. In fact, **testosterone enanthate** is considered to be the most widely used form of **testosterone** when it comes to **androgen replacement therapy**. Other than that, it is used for masculinizing hormone therapy, for breast cancer in women, delayed puberty in boys and a number of other health conditions.

Testosterone Enanthate Rus Bio Half Life

Testosterone Enanthate is having a half life of about 4-5 days which is shorter compared to **Testosterone Cypionate** with a half life of about 6-8 days but is longer compared to **Testosterone Propionate** with a half life of 1-3 days.

As much as we can see, **Testosterone Enanthate Rus Bio** is something like a “middle” **testosterone** and that’s why many people decide to use it. Generally, there’s no other difference between any given form of testosterone except for the half life.

Therefore, it is important to know that longer / shorter half lives are each having their own advantages and disadvantages. For example, **testosterone enanthate** enters your body slower compared to propionate and flushes out slower too. Less injection frequency is required but longer detection times.

How Does Testosterone Enanthate Rus Bio Work? | What Does Testosterone Do? | Rus Bio Uses

Testosterone Enanthate Rus bio is working the exact same way as naturally occurring **testosterone**, as it was earlier mentioned. **Testosterone Enanthate** – or any given form of **testosterone**, is absolutely no different from naturally occurring one in our body. When you receive it, the body cannot see a difference between the natural **testosterone** and the synthetic one received from the compound.

That’s why, when you use synthetic **testosterone** (any given form) you’re basically increasing your **testosterone** levels and this is leading to the benefits. And using different forms of **testosterone** ensures that you receive the **testosterone** levels at different rates.

Generally, **Testosterone Enanthate Rus Bio** is given to people who are having health issues associated with too low levels of testosterone in medical settings. It can be androgen replacement therapy, delayed puberty in boys, hypogonadism and others.

However, although bodybuilders and athletes do not have low levels of **testosterone** they still use testosterone enanthate and other forms of synthetic **testosterone** for increasing their **testosterone** levels and this greatly aids physique and performance enhancement.

It is often used in cutting as well as bulking cycles alongside with many different steroids as it greatly helps to grow muscles, lose fat, increase strength levels, increase protein synthesis, increase metabolism and many other benefits.

Testosterone Enanthate Cycle | Testosterone Dosage | Rus Bio Testosterone Enanthate Administration

Testosterone Enanthate Rus Bio is a product that can be used in both cutting as well as bulking cycles. It very much depends on the dosage of the **testosterone** and on what types of steroids you are using alongside with **testosterone**. We warn everyone to use **Testosterone Enanthate Rus Bio** exactly as prescribed by the doctor in case you got this product prescribed.

However, for physique and performance enhancement doses vary between 250 mg per week and 1000 mg per week in most cases. Having a fairly long half life, an administration twice per week is going to be enough. Total weekly dose split up in 2 even doses and use them in 2 different days that are evenly apart.

Remember you can use it for cutting and hardening as well as for bulking. Generally, doses between 500 mg and 1000 mg are for bulking. Doses between 250 mg to about 400 mg are for cutting in most cases while doses of 250 mg or so are for **TRT** during administration with other steroids.

There are a lot of different cycles with testosterone enanthate so it very much depends on what exactly you want to get receive out of using it. Especially because it can be combined with almost any given steroid.

Testosterone Enanthate Side Effects | Rus Bio

Testosterone Enanthate

Testosterone Enanthate Rus Bio side effects very much depends on the dosage. Side effects are extremely dose dependent and that's because the side effects are only associated with too high **testosterone** levels in the body. Reducing the dosage would result in getting lower levels of **testosterone** and this would reduce the side effects intensity and frequency.

In the end, pretty much as with the benefits, the adverse negative effects aren't from the product itself, but from too high levels of **testosterone**. Reduce the dosage or completely stop if side effects are too bad. Generally, most men tolerate this product very well within normal doses because a little bit of more **testosterone** is usually beneficial for most men.

However, side effects are associated with **androgenic** side effects, estrogenic side effects, natural **testosterone** inhibition, negative effects on **cholesterol** as well as on **cardiovascular** health. Generally, side effects can be controlled with different types of supplements, **PCT plan**, **aromatase inhibitors** as well as a healthy lifestyle. It would all greatly help.
