Pack: 100 tabs / (10 mg/tab)

Substance: Stanozolol

What is Stanorox? | What is Stanozolol? | What is Winstrol?

Stanorox is the brand name of **Stanozolol** and this is an anabolic and androgenic steroid that is also referred as **Winstrol** or **Winny**. **Winny** is the slang name of **Winstrol** and this is the most famous brand name of **Stanozolol** products. **Stanorox** is also the brand name of **Stanozolol** and there are many other brands with different names for **Stanozolol**.

Stanorox is manufactured by **Zzerox Pharmaceuticals** and since this is a company working under **GMP Standards**, you can be sure you get a high quality steroid containing pure **Stanozolol**. Plus, the steroid is very low priced allowing you to save a lot of money.

This steroid was firstly released on the market many years ago in the 1960s and it has been created for helping patients with various health issues and diseases like for example osteoporosis, venous insufficiency and others. However, later it become extremely popular in fitness and bodybuilding industries because this steroid was discovered to be very helpful for physique and performance enhancement purposes.

Stanozolol is a steroid that was derived from **dihydrotestosterone (DHT)** and is coming both in form of oral tablets which should be taken by mouth as an orally active C17 Alpha alkylated steroid as well as in form of injectable often being called **Winstrol Depot** and is the specific method of administration for **Stanorox**.

Usually, humans prefer the oral form as they only swallow a tablet while injection form given into muscle is often given for animals. However, some people still prefer to go for the injectable instead of oral tablets.

Stanozolol which is known as **Winstrol** or **Winny (Stanorox by Zzerox)** is one of the most widely used steroids in the world for physique and performance enhancement – for cutting and hardening cycles to be more specific. The product is outrun in popularity and uses only by **Dianabol** and **Deca**.

How Long Does Winstrol Stay in Your System? | Stanozolol Half Life | Stanorox

The half life of **Stanozolol** or **Winstrol** greatly depends on what's the method of administration. Also, for finding out how long would **Winstrol – Stanorox** stay in your system, you need to find out the half life and twice as much of that would be your answer. That's because, the half life is the time in which half of the drug used got flushed out of your body.

Stanozolol in form of oral tablets offers a half life of 9 hours and in form of injection in muscles offers a half life of about 24 hours. Therefore, it stays in your system for about 18 hours orally and 48 hours when injected.

Keep in mind that on anti doping tests, **Stanozolol** can be traced for up to about 2 months or so.

What is Stanozolol Used For? | What Does Stanozolol Do? | What Does Winstrol Do? | Stanorox

As it was earlier mentioned, **Stanozolol** was designed for various health issues in the past. Nowadays there are still some countries where **Stanozolol** is still used for those purposes such venous insufficiency, treating various skin issues and others.

However, for physique and performance enhancement purposes, this is by far the most famous and most widely used steroid for cutting and hardening purposes and that's because there's no other steroid which can work as **Stanozolol** does.

It works the same way as other steroids by binding to the androgen receptors. It therefore displays an anabolic rating of 320 combined with androgenic rating of only 30 without any aromatization and therefore no estrogenic activity. That's very favorable for steroid users.

Plus, this steroid is binding very strongly to the **SHBG** hormone making other steroids to be much more effective when used alongside with **Stanozolol**. In short, [Winstrol](#) greatly helps you to lose weight, helps you to build muscle mass, get lean and enhances vascularity all alongside with huge strength increases while making other steroids more effective.

Stanozolol Dosage | How to Take Stanorox? | Winstrol Cycle | Winstrol Dosage

Stanozolol which is contained in **Stanorox** is an hepatotoxic steroid and is a very unique steroid because is being hepatotoxic even when used in form of injection. **Stanorox** is coming in form of injection and is still hepatotoxic.

Due to the fact that **Stanozolol** is very hepatotoxic, cycle length usually should last anywhere between 4 to 6 weeks. Is not unheard of people going as long as 8 weeks, but that's only for professionals. Use helpful liver supplements.

Due to the half life of injectable **stanozolol** found in **Stanorox** being 24 hours, you are good to go by using it once a day, but no less frequently.

Doses of **Winnie** are anywhere between 25 mg a day up to 100 mg a day, but 50 mg seem to be the best dosing point for nearly everyone.

You can try **Winnie** – **Stanorox** with nearly any given steroid out there of your choice. But most often is used in cutting cycles and therefore with other cutting and hardening steroids like **Testosterone Propionate, Anavar – Oxandrolone, Drostanolone – Masteron** and others.

Stanozolol Side Effects | Winstrol Side Effects | Stanorox Side Effects

The worst side effect of **Stanozolol** is liver **hepatotoxicity** and that's regardless if you're using this product in form of tablets or in injectable form. **Stanozolol** is going to affect your liver even when used in injection form, unlike many other steroids which are dangerous for liver only when used orally, but have no risks for your liver health when injected.

Another notorious side effect of **Winstrol (Winnie)** is the joint pains – ligaments damage or dry joints. This is one of the reasons why **Winstrol – Stanorox** shouldn't be used during bulking cycles when you lift heavy weights. Using helpful joint supplements would greatly help.

These are considered the worst and the most famous side effects of **Winstrol** – [Stanozolol](#), but there are others as well. Being a **DHT** derived, women have big risks getting through **virilization** side effects such as hoarseness of voice, menstrual irregularities, hair growth on body and face and others which are basically turning a woman into a man.

Men do not have the risk to get **estrogenic** side effects such as gynecomastia and water retention including others, instead they have the risks for **androgenic** side effects such as hair loss, acne, oily skin, facial and bodily hair growth etc.

Side effects of **Stanozolol** can be really bad if the steroid is abused, so better stay with the doses within the normal range.
