

# Trenbolone Mix 150 mg Rus Bio / 10 ml

## Description

### What is Trenbolone Mix Rus Bio?

Trenbolone Mix Rus Bio is a mixture of all 3 different trenbolone compounds and with this being said, without any doubts, this is one of the most powerful steroids that you

would ever find on the market and this a product that is specifically created and designed for huge increases in muscle mass as well as offering a lot of physical performance enhancement.

**Trenbolone Mix 150** was manufactured by **Rus Bio** and this is a pharmaceutical company that has created this product specifically for physique and performance enhancement purposes, and since this is a product containing 3 forms of **Trenbolone** – one of the most powerful agent in existence, the results out of using this compounds are expected to be huge.

**Trenbolone Mix 150 Rus Bio** is containing 50 mg of each compound in particular (hence making 150 mg per ml and that's how it got this name) – **Trenbolone Acetate**, **Trenbolone Enantahte** and **Trenbolone Hexahydrobenzylcarbonate** (shortly called **Hexa**).

**Trenbolone Acetate** is having the shortest half life out of 3 time but is by far the most used form of trenbolone. **Trenbolone Hexa** is the second most famous and used form of **Trenbolone** and the longest half life which can be up to 14 days. **Trenbolone Enanthate** is somewhere in the middle offering a half life of around 7 days.

With this being said, the customers are able to use this product and get stable blood levels of **Trenbolone** and since there are 3 different forms, the peak blood levels are reached fast (thanks to Acetate) and it continues to stay on the peak level due to longer acting esters.

In the end, we can assume that you won't be getting any other results than those as using any **Trenbolone** compound in particular because with whatever **Trenbolone** used, the individual is receiving same active compound which results in same results and side effects.

The mixture is really helpful only for the injection frequency, active time in the body and always maintaining high blood levels. But since you receive **Trenbolone**, which is an anabolic and androgenic steroid that is very powerful, you can expect to get huge increases in muscle and strength mass in a very short period of time.

## What is Trenbolone Mix Rus Bio Used For?

When talking about **Trenbolone Mix 150 Rus Bio** specifically then we can say that it does not have any other uses than physique and performance enhancement. This compound was made specifically for such purposes as there are people who often use 2 or even all 3 **trenbolone** compounds at once.

**Rus Bio Pharm** made a single product containing all 3 forms so you can use it hassle free. As mentioned, ultimately, you would receive just **Trenbolone** and this compound itself is used for various needs, veterinary as well as clinical uses. However, the product is rarely used in humans. Mainly, is used as a veterinary medicine in livestock for increasing muscles growth and appetite.

Obviously, with such uses, humans would expect pretty much the same results. Those who are using it are gaining a lot of muscle mass and they have huge strength increases. That's all thanks to **Trenbolone's** extremely huge anabolic and androgenic activity which is 5 times the potency of testosterone as it offers Anabolic to Androgenic ratio of 500:500.

This steroid is considered the best steroid for cutting and hardening purposes because you gain muscle mass while cutting down (dieting) and is also extremely often used for bulking purposes when the individuals wants to add as much muscle mass as possible.

**Trenbolone** offers huge anabolic and androgenic activity, without aromatization and this means that no estrogenic side effects would bother you. **Trenbolone** is considered one of the most powerful product that can ever be found and this is the reason why many people tend to use it and others to avoid it – powerful steroid comes with powerful side effects.

## **How to Use Trenbolone Rus Bio? | Trenbolone Mix Rus Bio Dosage / Administration**

**Trenbolone Mix 150 Rus Bio** should be used by intramuscular injection as it comes in oil based form and it cannot be used in any other methods. Taking in consideration that the product is coming in 3 different forms of **Trenbolone** with different half lives, we would recommend a dosing schedule of about every 4-7 days for maintaining blood levels.

Dosing for **Trenbolone** depends on personal experience, knowledge, tolerance as well as goals. But in whichever the case, we won't recommend to use a dosage higher than 700 mg a week. Taking in consideration that a ml of **Trenbolone Mix** offers 150 mg, if you're going to use 5 ml per week that's going to be dangerous .

Most people find their sweet spot in doses anywhere between 200 to maximum 500 mg a week. Some people reported having good results at even 100 mg a week since this is such a powerful steroid.

Side effects with this powerful steroid are really nasty so we won't recommend to use more than you need. Cycle length with **Trenbolone** is usually lasting anywhere between 6 to 12 weeks, but we would recommend 8 or maximum 10 weeks. **Trenbolone** is often stacked with other steroids depending on personal needs – bulking or cutting.

## Trenbolone Rus Bio Side Effects

It doesn't really matter what type of **Trenbolone** are you using, the side effects are pretty much the same for all trenbolones since you receive same active substance.

Good news is that estrogenic side effects and hepatotoxic side effects are no worries with **Trenbolone** compounds. Nonetheless, progestin related gynecomastia is still a possible side effect.

However, the biggest problem is that **Trenbolone** offers all other **AAS** related side effects and it offers them at an even worse rate. For example, androgenic side effects are very possible such as aggression, acne, oily skin, hair loss and others.

Women are nearly guaranteed to get virilizing side effects if they are using **Trenbolone** compounds. Natural testosterone production is going to get a really big suppression and plus to that, you would receive: increased blood pressure, shortness of breath (**Tren Cough**), night sweats, insomnia and others.

[Trenbolone](#) is an extremely powerful steroid that you wouldn't be playing around. In fact, this is such a powerful steroid that is not recommended to start with **Trenbolone** if that's the first **AAS** you plan to use – better go for something milder.
