

Turinabol 10 mg Rus Bio / 100 tabs

Description

Manufacturer: Rus Bio Pharma

Pack: 100 tabs / (10 mg/tab)

Substance: Chlorodehydromethyltestosterone

What is Rus Bio Turinabol – Chlorodehydromethyltestosterone? | What is Turianbol?

Rus Bio Turinabol is the brand name of the active substance found in it **Chlorodehydromethyltestosterone** but this product might be better known by its other brand name – simply **Turinabol**. This is an **anabolic and androgenic steroid** that is taken orally in form of tablets that is very effective in promoting muscle growth and strength increases.

The **steroid** is considered to have minimal risk of side effects (a steroid that is considered safer compared to other steroids) and in the same time offers a wide range of positive effective – the main reason why the product is widely used by female athletes, steroid beginners or those who want to get a boost out of using **Rus Bio Turinabol** alongside with other **steroids**. All of this is thanks to its strong anabolic activity and moderately-low androgenic activity.

The product might also be known as **Oral Turinabol**, **Tbol** or **Oral Tbol** but **Apto-Turinabol** is the brand name of the product manufactured by **Rus Bio** and is a product offering the same high quality **4-Chlorodehydromethyltestosterone** but for a very attractive price. This product is very popular because of its very high demand among athletes of different disciplines including bodybuilding.

Being a modified form of **Dianabol (Methandrostenolone)** the product is also called “mild **Dianabol**” without aromatization effects. Plus, unlike many other available steroids out there, [Turinabol](#) was specifically created for helping those who want to improve their physique and enhance their performance without any medical treatments.

Turinabol Rus Bio Half Life | How Long Does Turinabol Rus Bio Stay in Your System?

Turinabol containing **4 Chlorodehydromethyltestosterone** is considered to have a half life of 16 hours and this means that **Turinabol** stay in your system for approximately 32 hours. Nonetheless, the detection time is by far not the same. Anti doping tests can stop traces of **Turinabol** about 12 months later after the last dosage so you shouldn't use it for a year if you want to pass a test.

If you're wondering about the half life so you could know how to use it – people tend to use it once daily or split the total daily dose in 2 halves for maintaining even more stable blood levels.

How Turinabol Rus Bio Works? | What is Turinabol Used For?

Turinabol is working in a similar with to other steroids by being an agonist of the androgen receptors. Nonetheless, there are various differences making it special. Being a derivative of **Dianabol**, the product is expected to work in a similar way, however there are still huge differences between the 2 **steroids** in the way they work.

Also, **Turinabol** has never been approved for any medical needs, instead it has been created and used exclusively for improving physique and enhance performance. Having extremely low androgenic activity, moderate anabolic activity and no estrogenic activity at all, users are able to expect slow, but steadily, quality and dry muscle gains.

You are not going to get as much muscle and strength gains and as fast compared to **Dianabol**, but you won't get as bad side effects and you won't get puffy looking muscles. The most noticeable effects include: increased strength (that lasts) alongside with increased muscle mass which lasts too. Something that **Dianabol** won't offer – more vascularity. But you also get increased muscle relief and hardness, increased stamina, increases in free **testosterone** and muscle and strength gains without actual weight gains.

Turinabol Rus Bio Administration / Dosage

Since it has low androgenic activity, women also use **Turinabol** for their physique and performance enhancing properties. Nonetheless, there are better options for women and that's why, although some women still use **Turinabol**, few of them opt for this **steroid**. Nonetheless, if you're still among those women, do not ever exceed 10 mg a day. In fact, a dosage between 2.5 mg to 7.5 mg a day is what we would recommend. Also do not use it for longer than 4-5 weeks.

Men, on the other hand, can tolerate much higher doses. An effective and safe dosage is considered to be anywhere between 20 to 50 mg a day. Both females and males should split the dosage up in 2 even halves a day or use it at least on a daily basis for good effects.

Turinabol might be a good bulking steroid only for women and only women might want to use **Turinabol** alone. Males are not recommended to use it alone because they won't

get great bulking benefits. Mostly it is recommended to use **Tbol** as a part of **steroid** stack.

Using **Turianbol** and **Dianabol** 25 mg a day each for 6 weeks would do a great job. Add **Cardarine** and **N2Guard** alongside with aromatase inhibitors if needed. Higher the dosage higher the chances to get side effects. That's why we recommend to start slowly. For example, you might try [Turinabol](#) alone 20 mg a day for 4 weeks. This cycle won't offer huge results, but this way you would get accustomed to the **steroid**.

Oral Turinabol Rus Bio Side Effects | Side Effects of Turinabol Rus Bio

It was mentioned that **Turinabol** is considered a fairly safe **steroid** compared to many others and that's true. But in the same time, it doesn't mean that is completely side effects free. Being a mild **steroid** doesn't mean you should abuse it – side effects would be nasty. **Turinabol** is considered safe only if used properly.

Worst side effect is liver **hepatotoxicity**. It is not as bad as with other oral **steroids**, but it is still toxic to the liver. **Natural testosterone** production can be **suppressed** too and that's another side effect. **Virilization** for women as well as negative effects on **cardiovascular** health are other side effects.

All these side effects are considered mild and it has no estrogenic side effects with very unlikely to offer any androgenic side effects – one of the main reason why people use this product. Nonetheless, you should use it carefully.
